# Using Repeat Signage Standard Edition over the Internet

Repeat Signage Standard edition allows screens to be remotely updated anywhere in the world via the Internet. For example, a business may have shops in London, Cardiff, New York and Paris, and the head office of the business is in Edinburgh. A 42" plasma screen in each shop shows information on the latest offers. London and Cardiff show the same presentation, but New York and Paris have different presentations. The 3 presentations UK.rsp, NewYork.rsp and Paris.rsp are stored in a folder on the company's website. Each 42" plasma is connected to a computer with Repeat Signage Professional Edition installed which is connected to the Internet via a low cost broadband connection. Each computer downloads it's presentation from the company website and checks for a new version every minute to see if it has been updated. The presentations are updated from the head office in Edinburgh and are uploaded to the company's website whenever they are changed. Play lists can also be used to schedule presentations remotely. www.repeatsignage.com

Administration office in Edinburgh where the computer updates the presentations LondonCardiff.rsp, NewYork.rsp and Paris.rsp and uploads them to the company website.

The Internet

UK.rsp   NewYork.rsp   Paris.rsp

Web server   **Presentation files on company website**

Edinburgh office

A Repeat Signage license is not needed for editing and publishing presentations.

Playing UK.rsp

Playing UK.rsp

Playing NewYork.rsp

Playing Paris.rsp

Cardiff shop window

London shop window

New York shop window

Paris shop window

4 Repeat Signage Standard Edition licenses would be required. One for each of the computers playing the presentations.
